WINTEX HYDRAULIC PROBE

GEOREFENCED
Soil Sampling with a
WINTEX-1000
Hydraulic Probe

WINTEX  AGRO

Our WINTEX probes
are mounted on all terrain vehicles and
operated by qualified
samplers.

At Synagri, we acquired our first WINTEX probe in 2015 and because of their performance we have purchased more units since. We use them to take all our georeferenced soil samples.

CLAY

LOAM

SAND

DIFFERENT SOIL TYPES,
DIFFERENT LEVELS OF FERTILITY

The WINTEX is a hydraulic probe used for fast and precise soil sampling. It samples at a consistent depth, which ensures a complete and homogeneous soil sample.

This sampling process is the key first step of a reliable soil analysis.
