

# PROGRAM EXPERTS SYNAGRI 2026 - CropBooster OP GRAIN CORN

## SELECTION CRITERIA

- The producer must agree to take on the role of an expert for CropBooster OP in grain corn.
- The producer must cultivate approximately 494 acres, including about 247 acres of grain corn.
- The producer must have the necessary GPS equipment to capture applications and data related to the tested product.
- The producer must select their trial fields for grain corn, with a minimum area of 50 acres and without excessive variability (topography, localized compaction, drainage issues, etc.).
- The producer must provide information on their crop program (hybrid, planting date, herbicide program, treatment date, other phytosanitary products used, etc.).
- The producer must have knowledge of social media.
- The producer must be well-connected in their community.
- The producer must be willing to provide a testimonial on the use and results obtained with CropBooster OP in grain corn.
- The producer must agree to be filmed and/or photographed in action while using CropBooster OP in grain corn.
- The producer must agree to have video and/or photo images of their treated fields captured.
- The producer must authorize Synagri to share the trial results, testimonials, and images on social media and in marketing materials.

## OFFERED COMPENSATIONS

Synagri will provide **100L of CropBooster OP** in the first year and **200L** starting from the second year to conduct comparative trials on approximately 247 acres of grain corn.

At the end of the trials, **Synagri will organize a reward event for participants in the Experts 2026 program, featuring an exclusive presentation of the trial results.**
